**Don & Betty Kirkham Soil Physics Award**

Dr. Lis Wollesen de Jonge, a Professor from Aarhus University (Denmark), received the SSSA’s 2021 Don and Betty Kirkham Soil Physics Research Award. She is a world-leading scientist in several soil physics research areas including: colloid-facilitated transport of strongly sorbing compounds, understanding and quantifying interactions between key soil processes and soil architecture, water repellency and fingered flow in soils, diffusion and volatilization of volatile organic chemicals, heterogeneous transport of water and solutes in macroporous medium.

**Soil Physics & Hydrology Early Career Award**

Dr. Hailong He, an Associate Professor from Northwest A&F University (China), received the SSSA’s 2021 Soil Physics and Hydrology Early Career Award. Dr. Hailong He received his Ph.D. in Water and Land Resources at the University of Alberta (Canada) in 2015 and now is associate professor in soil physics and Soil & Water Conservation. His research interests are to understand the fate and transport of mass and energy in cold and arid regions with novel methods and techniques.

**Robert Luxmoore Student Travel Award**

The recipients of this year’s Luxmoore Student Travel Award are:

- **Yingxue Yu**, who studies transport mechanisms of bio-colloids as well as micro- and nanoplastics in unsaturated porous media at Washington State University and
- **William (Jerry) Brown**, who studies soil moisture and the processes that influence water and soil interactions at Oklahoma State University
