

USDA Research is working for Wisconsin

Supporting innovation

In FY 2013, Wisconsin received **\$6.5 million in grants** from the Agriculture and Food Research Initiative (AFRI)

At the **University of Wisconsin-Madison**, AFRI funding is being used to test if allergen mimics could be used in people with severe food allergies (ex. milk, wheat, peanut) as a "vaccine" for their allergic reaction.

AFRI funded researchers are studying how winter application of manure to managed dairy systems is impacted by frozen soil and snowmelts in order to reduce nutrient loss and improve water quality.

Supporting small business

From 2004-2013, Wisconsin small businesses received more than **\$7.9 million in grants** through the Small Business Innovation Research program within USDA.

In Madison, **Orbital Technologies Corp.** is developing an LED system that will keep plant-eating insects away from greenhouse crops, representing a non-toxic alternative to chemical pesticides.
